SUMMARY

Data Science undergraduate with hands-on research and engineering experience in Artificial Intelligence, Natural Language Processing, and Large Language Models. Currently working as an AI Researcher at the Institute of Digital Transformation - HUIT, focusing on Vietnamese NLP tasks such as clickbait detection, fact-checking, fake news detection, information extraction, and topic classification. Experienced in building reproducible ML/LLM pipelines, fine-tuning and evaluating transformer-based models, conducting error analysis, and contributing to Scopus-indexed publications. Seeking AI Engineer, Machine Learning Engineer, or Data Scientist opportunities.

EDUCATION

Ho Chi Minh City University of Foreign Languages – Information Technology

Oct. 2022 - Mar. 2026

Bachelor of Science in Information Technology - Major: Data Science - GPA: 3.57/4.00 (Very good)

- **Thesis:** Leveraging Large Language Models for Clickbait Detection - **Score:** 9.5
- **Research Interest:** Machine Learning, Deep Learning, Natural Language Processing, LLMs.

EXPERIENCE

AI Researcher

Mar. 2025 - Present

Institute of Digital Transformation - HUIT

- Research and develop AI/NLP solutions for Vietnamese text processing tasks, including clickbait detection, fact-checking, fake news detection, and topic classification.
- Build and evaluate machine learning, deep learning, transformer-based, and LLM-based models using reproducible training and benchmarking pipelines.
- Apply prompt engineering and lightweight fine-tuning methods such as LoRA/QLoRA for Vietnamese NLP tasks.
- Support dataset construction, model evaluation, error analysis, and preparation of technical reports and research publications.

AI Researcher Internship

Dec. 2024 - Feb. 2025

Institute of Digital Transformation - HUIT

- Assisted in data collection, cleaning, and preprocessing for Vietnamese NLP research projects.
- Implemented baseline models and evaluation scripts for text classification tasks.
- Supported experiments with machine learning, deep learning, and transformer-based approaches.
- Conducted literature review and documented experimental results for research reports.

PUBLICATIONS

- Thanh-Long Nguyen, Nguyen Khanh Vy, **Nguyen Minh Y**, Huynh Ly Tan Khoa, Suong Tieu*
WindFusion-EW: An Ensemble-Weighted Multi-Model Framework for Ultra-Short-Term Wind Power Forecasting,
Engineering, Technology & Applied Science Research (ETASR), 2026 - Q2 
- Dai Phuoc Nguyen, Thien Khai Tran*, **Y Minh Nguyen**, Bay Vo
ViClickbait-2025: A Comprehensive Dataset for Vietnamese Clickbait Detection, **Data in Brief - Q1** 

PROJECTS

ViClickbait-2025 — Data Collection and Curation for Vietnamese Clickbait Research May. 2025 - Jul. 2025

- Led end-to-end data sourcing from major Vietnamese news and social channels using resilient crawlers, rate-limit handling, and content normalization.
- Built a quality pipeline: language and media checks, HTML cleanup, near-duplicate removal with 85% fuzzy threshold, URL and entity de-duplication.
- Designed multi-annotator workflow with clear guidelines and audit trails; achieved **Cohen's Kappa 0.822** across four reviewers.
- Added safety and ethics gates: removal of sensitive PII, bias scan, and content provenance logging.
- Packaged the corpus with documented splits and schemas; released code, dataset cards, and evaluation scripts; **total size 3,414 labeled items** from **eight sources**.

Vietnamese Topic Classification - UIT-VSFC Sep. 2025 - Oct. 2025

- Built a fine-tuning pipeline for **GPT-OSS 20B** on **UIT-VSFC**, including data prep, instruction formatting, and reproducible train/eval scripts.
- Implemented constrained decoding and optional class-weights to handle imbalance; unified reporting.
- Optimized training on A6000 48 GB via 4-bit QLoRA, BF16, gradient accumulation; packaged clean CLI and docs for reuse.
- Benchmarked vs. paper baseline: Topic test = Acc 87.18%, Macro-F1 0.7915, +8% Macro-F1 over the original baseline.

Kono Shop - E-commerce Web Application Nov. 2024 - Dec. 2024

- Developed a full-stack e-commerce web application with product browsing, cart management, checkout flow, and order-related features.
- Implemented backend APIs and database operations for managing products, users, carts, and orders.
- Designed responsive user interfaces and organized reusable components/pages to improve maintainability.
- Used Git/GitHub for source control, project documentation, and iterative development.

HONORS & AWARDS

4th Place, OAI HCMC Artificial Intelligence Olympiad 2025 — Ho Chi Minh City	Apr. 2025
Consolation Prize APEC Innovation — Ha Noi	May. 2025
Third Prize, Vietnam Student Artificial Intelligence Olympiad 2025 (OlpAI'25), Southern Region	Aug. 2025
Consolation Prize, National Final Round, Vietnam Student Artificial Intelligence Olympiad 2025	Dec. 2025

SKILLS

Programming: Python, C/C++, C#, SQL, Javascript

Frameworks: Scikit-learn, Pytorch, Transformer, HuggingFace, LLama.cpp, Unsloth, Nodejs, Reactjs

DevOps: Docker, Mlfow, Airflow, Apache Spark

Database: MongoDB, MySQL, Firebase

Tools & Platforms: Git/Github, VSCode, Linux, Google Colab/Kaggle

Others: Problem solving, academic writing, Collaboration & cross-functional teamwork, Presentation & documentation

Languages: Vietnamese, English
